PCS 92144

Biopower is an adjuvant for use with a wide range of agrochemicals to improve their effectiveness. When used alone biopower has no pesticidal activity.

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

Biopower used alone has no herbicidal, fungicidal or insecticidal activity, however in a tank-mix with many agrochemicals it will improve their activity. When used in this way it may be possible to reduce the dose of the active chemical or increase its pesticidal effect.

If biopower is mixed with a product, which can have some phytotoxic effect, this effect may be enhanced and care should be taken to avoid this use.

DOSE

1 litre biopower per hectare.

Ensure that the label recommendations for the mixture products are fully adhered to.
